SMART HOME PACK

ULTIMATE COMFORT

The Crownstone Smart Home Pack brings you ultimate comfort!

- **Switch and dim** devices and lamps. Every power outlet and every light source can be controlled from the comfort of your couch, or remotely from your job, for your convenience.
- **Automatic lighting** per room. Walk into a room with your hands full and the light automatically switches on!
- **Wake-up light function** per lamp. Wake up naturally every morning with a lamp that slowly increases its intensity, instead of with that awful ringtone every morning.
- **Artificial intelligence** in your home. Lights and devices are turned on when you need them and turned off when you don't. Saves you some energy usage too!

“

YOUR PRESENCE MAKES THE DIFFERENCE

”

EVEN BEFORE YOU THINK OF IT...

The heating turns on automatically on set times. However, lights or devices do not.

Of course it's practical to switch on lights, sound, or other things using a wall switch. But it's not necessary. Sometimes your hands are dirty or full, or the kids forget to turn off the lamps or the television.

The more your house learns, the better your house can assist you!

WAKE-UP LIGHT

Instead of setting an alarm on your smartphone (which can also go off when you're already on the road) Crownstones can be placed behind your bedroom lights. When it's time to wake up, the lights will turn on and slowly increase their intensity. This way you can wake up naturally and well-rested.

MULTI ZONE-HEATING

By pairing the Crownstone with smart radiator valves, you can achieve the right temperature for every room. Not too cold in the livingroom and not too hot in the bedroom. This way you increase your comfort and save energy at the same time!

COMPATIBILITY

The Crownstone integrates well with other smart home devices. The Smart Home system supports Amazon Alexa, Homey, and Toon, among other products. More compatible products are added every month.

TURN-OFF STRESS

No more worrying about whether or not you turned off your iron or switched off all the lights when you're away! It's also a comforting thought you won't have to chase the kids around, telling them to turn off all the appliances they used. Even when you're away, you can remotely control your appliances.

A SMART CHILD LOCK

Buying and installing childproof power sockets is easy. Our devices, on the other hand, are not that well protected. We usually immediately put dangerous devices such as irons away, but do we also unplug the microwave or electric kettle?

Every device has a kind of fingerprint, which is unique for its type. Crownstones recognize which device is plugged into the power outlet by carefully monitoring these fingerprints. For instance, a microwave can be set up in such a way that it only turns on when an adult is in the room. Of course the kids don't have to carry a separate sensor on them.

PRESENCE-SIMULATION

To outsiders it's usually very obvious when we are away on vacation: a few nights in a row the lights aren't turned on. When someone breaks in, the costs for damage to windows and household effects can mount up to a 1000 euros. The value of the actual theft can easily mount up to more than 6000 euros.

Of course it's important to have an alarm set up. However, it's better to be safe than sorry. With the Smart Home Pack, all lights will automatically turn on at the same time you would usually turn them on yourself, as if you are still at home.

SMART HOME PACK CONTENTS

The Smart Home Pack consists of one built-in Crownstone (suitable for every power outlet) and a smart radiator valve (suitable for every radiator). The Smart Home Pack comes with a free app for both Android and iPhone. New functionalities will automatically be available through regular updates.

Built-in Crownstone

Smart radiator valve

INSTALLATION

Installing the Crownstones is best done by an official electrical mechanic. The installation fee is included in the overall price and covers all tasks concerning the correct placement of the built-in Crownstone behind your regular power outlet, as well as a call-out fee. Additional work concerning wall socket modification or replacing existing power outlets must be consulted with the individual electrical mechanic.

For a non-binding offer, please contact us at installer@crownstone.rocks.
